

Setup 1

Per discussion with Aaron, this setup should work, but has limitation of power draw on IQRV3 battery. BG96 EVB will get at most 500mA but we figure this should be sufficient.

Very little operating time between charges.

Setup 2

This reduces the power limitation, but will still drain IQRV3 battery.

Setup 3

Nearly the ideal setup, still has limitation of directly using console to IQRV3

Power Supply replaces battery (4.2V)
